

Good inventory control or fixed asset control greatly reduces costly inventory (or fixed assets) errors, improves customer service, and increase the value of your business. Realtime inventory software and inventory tracking systems are easy to use and implement without the cost or complexity of larger inventory tracking systems.

Realtime Inventory control system supports bar code function for each stock keeping unit(SKU) and stock take hand held device.

FAQ:

- Can I print my bar code at the point when I received my goods from the supplier? **Yes**
- Can I print my bar code in advance when I issue a Purchase order to my supplier? **Yes**
- Can I reprint my bar code whenever there is a need due to change of information? **Yes**
- Can I print my fixed asset bar code label sticker, without cost price? **Yes**

Why do company print bar code when the product already comes with bar code?

When goods are under consignment, company would print their own bar code to cover the product bar code so that the quantity can be tracked separately and properly accounted for.

What brand and specification that is compatible to Realtime bar coding system?

Realtime recommend Sato bar code label printer, however, subject to user request, Realtime R&D team can still reconfigure your existing bar code label printer. Please ask for a separate quote.
