

Efficient stock control means you have the right amount of stock in the right place at the right time. Regular stock takes keep tight control of your stock, reducing problems such as overstocking, shrinkage and cash flow.

But stock taking can be time consuming and expensive.

Realtimme Stock Control solution allows you to embrace the advances in modern hand held technology to automate previously labour intensive warehouse tasks. The handheld helps you speed up your stock taking processes and simplify the task through barcode scanning of your stock.

Replace your manual system with Realtimme

You can also:

- Record Stock Receiving
- Stock transfer
- Verify correct shelf price
- Stock take without paper and pen
